

ENT/Dental Problem - Unspecified

For a problem located in the ear, nose, throat area; NOT epistaxis – use PI Epistaxis; NOT airway obstruction – use Airway Obstruction

History	Signs and Symptoms	Differential
<ul style="list-style-type: none"> • Age • Past medical history • Medications • Onset of pain/injury • Trauma with “knocked out” tooth • Location of tooth • Whole vs. partial tooth injury 	<ul style="list-style-type: none"> • Bleeding • Pain • Fever • Swelling • Tooth missing or fractured 	<ul style="list-style-type: none"> • Tooth decay • Infection • Fracture • Avulsion • Abscess • Facial cellulitis • Impacted tooth (wisdom) • TMJ Syndrome • Myocardial infarction

Pearls

- Significant soft tissue swelling to the face or oral cavity can represent a cellulitis or abscess.
- Scene and transport times should be minimized in complete tooth avulsions. Reimplantation is possible within 4 hours if the tooth is properly cared for.
- Occasionally, cardiac chest pain can radiate to the jaw.
- All pain associated with teeth should be associated with a tooth which is tender to tapping or touch, or sensitivity to hot or cold.
