ALS UNIT MINIMUM INVENTORY

Adopted: 07/01/2015

Revision: 09/30/2025

Effective: 10/01/2025

(Signature On-file)

David Duncan MD, EMS Agency Medical Director

PURPOSE:

A standardized inventory control program will ensure that appropriate levels of Advanced Life Support (ALS) equipment and medication inventories are maintained and carried on all approved ALS units operating under the authority of the El Dorado County Local Emergency Medical Services Agency (LEMSA).

SCOPE:

This policy applies to all providers operating under the authority of the LEMSA, including public safety agencies and private ambulance providers.

DEFINITIONS:

Minimum Equipment Inventory - The minimum inventory of equipment and medications that are required to be carried on approved ALS units. Additional quantities of listed equipment and medications may be carried at the discretion of the ALS provider.

ALS Transport Unit – An ALS ambulance that is permitted and equipped to transport El Dorado County patients.

ALS Non-Transport Unit – A response unit such as a fire engine/truck that is capable of providing full ALS care but not capable of patient transport.

ALS Command/Utility Unit – A, squad, truck, SUV, UTV or other type of response unit that is capable of providing limited ALS support, such as incident command, special events, or rescue.

CAL-MAT – California Medical Assistance Team.

Contractor – Joint Powers Authority (JPA) under contract to provide EMS care in El Dorado County.

POLICY:

- 1) The EMS Medical Director has the authority to set the minimum standards for ALS equipment and medications that are to be maintained. This standard shall meet State and local policies, protocols and regulations, and shall ensure the capability to provide an ALS level of patient care. Each ALS provider shall implement an inventory control program to ensure that all ALS units have appropriate ALS equipment and that medications are stocked to at least the minimum level inventory required.
- 2) When determining what inventory your unit(s) will carry, keep in mind the potential for multiple patients and/or multiple calls before restocking. For Non-Transporting and Command/Utility Units this limited inventory may necessitate restocking from the ALS Transport Unit prior to transport of the patient in order for the Non-Transport Unit to stay "in-service".
- 3) Records of daily inventory shall be retained by the Contractor for a minimum of twenty-four (24) months.
